IN 2009, KU became the first public university in the United States to adopt a faculty-initiated open access policy for faculty research published in peer-review journals. The policy was endorsed by KU Faculty Senate on April 30, 2009, and “asserts the rights of KU faculty to provide broad, free access to their journal publications to colleagues around the world.” For additional information about participating in the open access policy, visit openaccess.ku.edu. To view the faculty policy document, visit policy, ku.edu/governance/open-access-policy.

Progress in teaching and learning is a process in which each new insight is built on hundreds of insights that others have made before. The Internet age would seem to open fantastic opportunities for magnifying this process, such that more insights are made faster and with still-better foundations, yet much of this promise has gone unrealized, as the scholarly literature has become increasingly difficult to access owing to commercial interests. Open Access offers a route by which to make the entire corpus of scholarly literature available globally, to all, thus greatly enabling progress in scholarly research.

— Dr. A. Townsend Peterson, University Distinguished Professor of Ecology and Evolutionary Biology, and Curator, Biodiversity Institute

KU FACULTY can exercise their copyrights when their scholarly work is accepted for publication by retaining sufficient rights in their publication agreements. Once the necessary rights are retained, faculty members provide citation information and a copy of the publication to staff in the Shulenburger Office of Scholarly Communication & Copyright. We then provide efficient and effective access to these publications by means of KU ScholarWorks (kuscholarworks.ku.edu), the university’s publicly accessible institutional repository.

How KU Libraries’ SHULENBURGER OFFICE OF SCHOLARY COMMUNICATION & COPYRIGHT can help:

Before you sign the publishing agreement: ADVICE AND CONSULTATION ABOUT COPYRIGHTS.

We offer one-on-one, personalized consultation to KU faculty and researchers. Email a copy of the publication agreement to the Head of the Shulenburger Office of Scholarly Communication & Copyright Ada Emmett at lib_oscc@ku.edu to determine whether the agreement allows for open sharing or whether adjustments to the agreement might be considered. A good starting point for determining what rights are in the standard agreement for a given journal (as well as embargo information) is the SHERPA/RoMEO site: www.sherpa.ac.uk/romeo.

After publication: ONE-STEP SUBMISSION OF YOUR WORK.

Email the citation information, a copy of the work, and any embargo or special conditions information to lib_oscc@ku.edu. Our staff will upload your work to KU ScholarWorks on your behalf, when possible.

MAKING YOUR PREVIOUSLY PUBLISHED WORK MORE VISIBLE via KU ScholarWorks.

We can also enter citation information for your prior publications into KU ScholarWorks; if open access rights were not retained, a link to the publisher version can be provided instead of full-text. Contact Emmett for more information.

Ongoing: SHULENBURGER OFFICE OF SCHOLARY COMMUNICATION & COPYRIGHT STAFF AND ASSOCIATES

We work with academic departments on an ongoing basis through our faculty open access liaisons, library faculty colleagues, and our early adopter faculty, to keep all apprised of new information, resources and tools available regarding open access at KU.

KU ScholarWorks: BEYOND ARTICLES

KU ScholarWorks isn’t just for journal articles; for example, theses and dissertations for all KU students since 2008 are published there. You may also consider submitting other scholarly and creative work, including:

- Performances, interviews and other audio and visual recordings
- Creative works
- Datasets
- Technical reports
- Monographs
- Book chapters

For more information, contact the Shulenburger Office of Scholarly Communication & Copyright (lib_oscc@ku.edu or 785-864-0330) or visit openaccess.ku.edu.

Benefits of Open Access

Providing open access to your scholarly work benefits you directly, the community of researchers at KU, in your field and scholars and citizens throughout the world by making that work more freely available. The benefits to scholars who offer open access to their research include:

- **Increased visibility**: KU ScholarWorks is searchable via search engines such as Google Scholar and offers much greater visibility than research databases. Your work becomes more visible to fellow researchers, funders, students and the world.

- **Tracking the use and impact of your work**: KU ScholarWorks tracks download statistics on each article, collection, and community, and the location of readers by country and occasionally by city. Authors have found this to be very useful in tracking alternative metrics of impact of their work.

- **Federal Grant Compliance**: As a growing number of federal agencies adopt public access policies KU ScholarWorks may help meet dissemination guidelines specified by many federal grants.

- **Preservation, stability and longevity**: KU ScholarWorks provides long-term preservation for your materials by managing backups and ensuring that your work remains accessible. Every item in KU ScholarWorks has a permanent, citable URL that will not change. In addition, KU Libraries will provide lifecycle stewardship of your files into the future, ensuring that as technology and formats evolve, your work will remain accessible and usable.
